

SL183 Series Lens Installation Procedure

Lens installation procedure:

It is best to install the lens by grabbing the lens on the lower portion of the lens body, the section with the thumbscrews, and not on the upper portion. This will avoid any chance of damaging the lens.

The Correct hand picture shows the proper hand grab position on the bottom of the lens.

The Not correct hand picture shows the hand grab position that could damage the lens focus if too much downward pressure is applied.
